

Boletín de Novedades Bibliográficas y Hemerográficas

Agosto 2023

Centro de Documentación "Dr. Rogelio Díaz Guerrero".
Cursos de Búsqueda de Información Psicológica en bases de datos

Le invita a participar en los cursos de Búsqueda de Información Psicológica en bases de datos (duración 10 h), cuyo objetivo es contribuir al alcance de competencias (conocimientos, habilidades y aptitudes) que le permitan al estudiante y al académico identificar sus necesidades de información y utilizar diferentes formatos, medios y recursos físicos o digitales.

Se impartirán, dos horas diarias, de lunes a viernes y para acreditarlo se tienen que cubrir 10 horas. Cupo mínimo para apertura del curso 6 personas, cupo máximo 10 personas.

Nota: Se pueden abrir cursos en horarios y fechas distintas a las establecidas, siempre y cuando los alumnos se organicen en un grupo de 6 personas, cupo máximo 10 personas.

Frases para recordar

"La esencia de la conciencia humana es la capacidad de reflexionar sobre uno mismo"

Franz Brentano
(1838—1917)

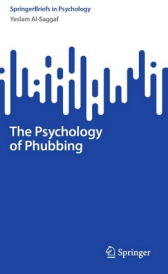

Centro de Documentación " Dr. Rogelio Díaz Guerrero "

Libros digitales en Librunam

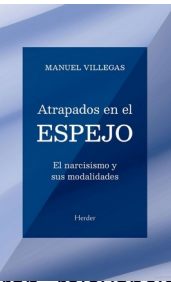

Al-Saggaf, Yeslam. (2022). Psychology of Phubbing. Singapore: Springer.

This work focuses on the psychological effects of phubbing by parents, children, partner, partners, bosses, employees, friends, and family members on other family members.

The book presents an exposition of the psychological predictors of phubbing (the triggers), followed by a broader account of the psychological effects of phubbing behaviour. The final chapter looks at the role of social norms in explaining the act of phubbing beyond the individual predictors that trigger the behaviour as it tries to draw a connection between phubbing and social theory.

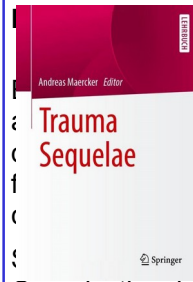

Villegas, Manuel. (2022). Atrapados en el espejo: El narcisismo y sus modalidades. Barcelona: Herder.

El narcisismo presenta modalidades relacionadas con el valor que se otorga a la imagen, reflejada en la realidad y simbolizada por el espejo. Este fenómeno adquiere gran relevancia en la actualidad, debido al alcance de las redes sociales que lo promueven con la búsqueda constante del valor de la propia imagen a través de la mirada de los otros.

Manuel Villegas ofrece en esta obra un completo estudio acerca de este fenómeno, en la que el narcisismo se aleja de perspectivas psiquiátricas o psicoanalíticas, y se acerca a las variedades específicas del momento evolutivo y del contexto existencial en que se configuran.

Reas. (2022). Trauma and its Sequelae. Berlin: Springer.

This book discusses the long-term effects of violence, sexual violence, disasters or other traumatic events on relatives or friends who experience extreme situations and trauma-related disorders.

The World Health Organization has distinguished four such disorders in its classification list: "classic" post-traumatic stress disorder, as well as prolonged grief disorder and adjustment disorder.

These long-term effects are described in detail in the book.

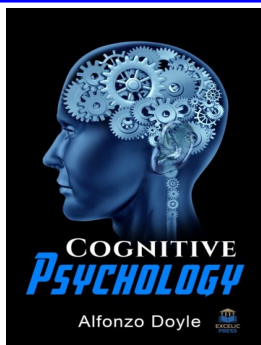

In recent years, a variety of interventions have been developed to effectively treat these disorders.

Liamputtong, Pranee. (2023). How to conduct qualitative research in social science. Singapore: Springer.

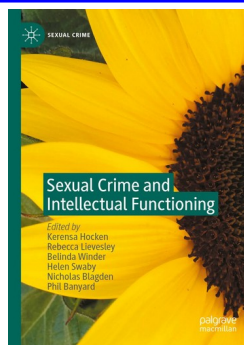

Explaining both the theoretical and practical aspects of doing qualitative research, this book uses real-world research projects to emphasise how to conduct qualitative research in the social sciences. It draws together contributions covering qualitative research in cultural and medical anthropology, gender studies, political science, criminology, demography, economic sciences, social work, and sociology. The chapters highlight an approach for understanding human thoughts and actions, and examine how they actually function in society.

ias. (2022). Grief in Schools: Knowledge and Advice on Dealing with Dying and Death. Springer.

How to deal with the death of children and adolescents are described and reasons for grief are presented: Death due to chronic illness, sudden deaths such as suicide, accident, and severe targeted violence.

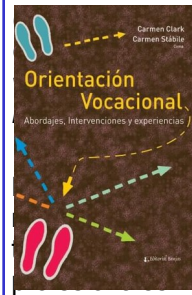

Appropriate intervention measures are presented.

Finally, the limitations of these intervention measures in schools are discussed.

Roberto (2022). Neurocognición del lenguaje. Editorial Médica

El lenguaje y su desarrollo en el cerebro ha sido un tema que se ha ido desarrollando desde finales del siglo XIX hasta la actualidad. Durante este tiempo, se han desarrollado diferentes perspectivas que han servido tanto a la psicología como a la neurología, a la medicina y a la biología, para teorizar y constatar cómo se desarrolla el lenguaje y cómo su actividad se refleja en el cerebro. Esta geografía intelectual e investigadora se ha dilatado aún más en el siglo XXI de forma más general y universal, permeabilizándose interdisciplinariamente con nuevos medios para reformular su campo.

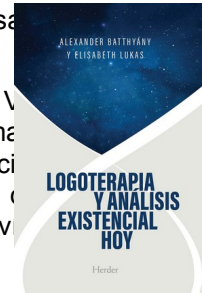

(2022). Orientación Vocacional: Abordajes, Intervenciones y experiencias.

Este es un material que aborda los marcos referenciales, teorías y rol del Psicólogo/a orientador/a desde la perspectiva de salud mental, género, y derechos. Continúa con el rol profesional en la etapa de información ocupacional y los recursos auxiliares para las intervenciones. En el tercer capítulo se comparten algunas experiencias de intervenciones, la Orientación vocacional y población con discapacidad, orientación vocacional y adultos mayores, e inserción laboral en contextos educativos universitarios.

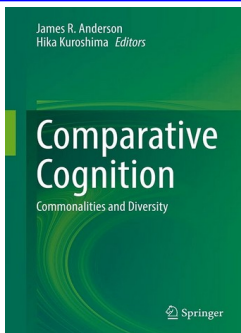

Batthyány, Alexander. (2022). Logoterapia y análisis existencial hoy: un balance. Barcelona: Herder.

Para la logoterapia el sufrimiento es un elemento constitutivo de la existencia que es necesario tener un lugar adecuado de nuestra vida y otorgarle un sentido.

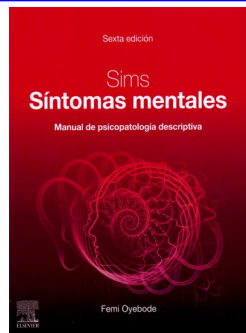

En esta obra, a través de un hondo y enriquecedor diálogo, los expertos en la obra de Viktor Frankl sumergen en la logoterapia a la luz de las circunstancias actuales, aplicándola a aquellos temas que no se pudo conocer, como las patologías causadas por el uso de dispositivos electrónicos, la migración, los nuevos radicalismos o la creciente negación de un sentido de la vida en las sociedades modernas. En este modo, los autores formulan una logoterapia actualizada, capaz de dar respuestas, todavía hoy, a las inquietudes existenciales de nuestra vida.

Drønnen, Merethe. (2022). *Positive Leadership: Using Positive Psychology for a Better Workplace*. Cham: Springer.

This book demonstrates how leaders can use research from positive psychology to increase and wellbeing, improve relationships, and increase performance and productivity in the work. It teaches leaders how to use psychology to understand their own contributions to the organization as well as to understand how their employees are being motivated to increase their productivity.

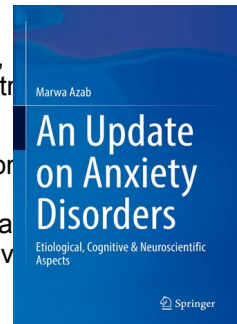

Suitable for leaders, human resource personnel, consultants and coaches, this book gives evidence-based theory and insight into how leaders' own attitudes, mind-sets and authenticity affect their employees level of performance, emotions and creativity.

Azab, Marwa. (2022). *An update on Anxiety disorders: Etiological, cognitive & neuroscientific aspects*. Cham: Springer.

This book aims to synthesize recent theoretical and experimental findings from psychology, epigenetics and genetics to understand anxiety disorders and their etiology and treatment. Each disorder is discussed from cognitive, behavioral and biological perspectives.

The book evaluates talk therapies, mindfulness-based interventions, brain stimulation and neurofeedback treatments. Chapters consider a biologically-informed framework for the anxiety disorders. In line with current thinking, the book integrates many levels of information (from molecular and circuits to behavior and self-report) to understand normal and abnormal human behavior.

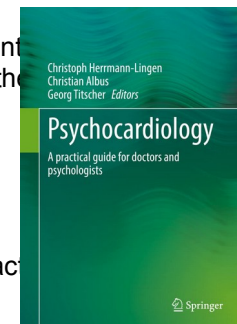

Albus, Christian. (2022). *Psychocardiology: A practical guide for doctors and psychologists*. Berlin: Springer.

Psychosomatic diagnostics and therapy are of increasing importance in the acute treatment and rehabilitation of cardiovascular diseases. The connection between heart disease and the psychosocial concomitant symptoms is well documented.

Contents:

- Basics of cardiology and psychosomatic medicine;
- Doctor-patient relationship;
- Psychosomatic problem areas and comorbidities in coronary heart disease: Personality factors, risk behaviours, depression, anxiety disorders;
- Training courses in psychocardiology.

Beyond the dead zone: The meanings of loving violence in Highland Mexico.

Whittaker, Catherine: Department of Social and Cultural Anthropology, Goethe University Frankfurt am Main, Germany.

Abstract: When violence clearly conveys a message and produces order, it simplifies meaning. Worded differently, it creates a “dead zone” (Graeber 2012). This article argues that intense, passionate love, like intense, physical violence, drastically diminishes meaning and enhances the potential for harm. In recent globalized feminist discourse, it is commonly claimed that love and violence are mutually exclusive, which rests on the assumption that violence is bad and love is good. Yet strictly separating love and violence (e.g., by purging sacrifice from one's understanding of love) intensifies the two and produces dead zones. By contrast, many inhabitants of Milpa Alta, a rural, partially Nahuatl-speaking community south of Mexico City, contend that violence can only be understood in relation to love. They define both concepts in terms of their affective qualities and potential to transform marital and social life. Violence, like love, is neither inherently negative nor positive because sacrifice and punishment are often considered key ingredients for maintaining a productive love among spouses, siblings, and within the wider community. Leaving the boundary between love and violence conceptually and morally porous allows them to remain generative of meaning and retain their productive potential.

Blumstein, Sheila. (2022). *When Words Betray Us: Language, the Brain, and Aphasia*. Cham: Springer.

The aim of this book is to provide a window into language and the brain through the lens of and language disorder resulting from brain injury in adults. This book answers the question of how we analyze the pieces of language, its sounds, words, meaning, and ultimately puts them together as a whole.

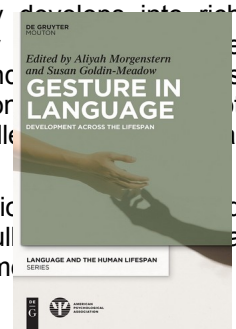

While its major focus is on clinical, experimental, and theoretical approaches to language disorders, it integrates this work with recent technological advances in neuroimaging to provide a state-of-the-art of language and brain function. Consideration will also be given to whether language can be recovered after injury or when areas of the brain recruited for speaking, understanding, or reading are damaged, as seen with people who are deaf or blind.

Morgenstern, Aliyah. (2022). *Gesture in language: development across the lifespan*. Berlin: De Gruyter.

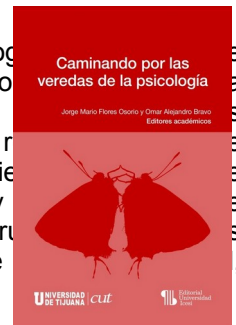

Through constant exposure to adult input in interaction, children's language gradually develops into rich linguistic constructions containing multiple cross-modal elements subtly used together for various functions. Sensorimotor schemas provide the "grounding" of language in experience and access to the symbolic function. With the emergence of vocal or signed language production, these schemas disappear but remain functional and diversify in form and function as children become skilled conversationalists.

This volume examines the role of gesture over the human lifespan in its complex interaction with language. Gesture is explored in the different stages before, during, and after language has fully emerged. A special focus is placed on the role of gesture in language learning and cognitive development.

Flores Osorio, Jorge. (2022). *Caminando por las veredas de la psicología*. Cali: Editorial Universidad ICESI.

Este libro presenta una mirada a los constantes debates y reflexiones en torno a la psicología: investigación, de intervención y de práctica profesional. También constituye un esfuerzo de la disciplina a través de un filtro crítico, especialmente en lo que se reproduce como programas de formación de psicólogos en la región latinoamericana. Hace un aporte contemporáneo en el campo de la psicología social y, a la vez, constituye una herramienta de utilidad en la formación de futuros/as psicólogos/as. La diversidad de enfoques teóricos y metodológicos que el libro propone, aunque lejos de cualquier pretensión conclusiva, permite la construcción de interrogantes, en un campo atravesado por tensiones y desafíos que obligan a darle este carácter necesariamente inacabado, como la realidad a la que refiere.
